WTI - inverter heat pump with integrated water heater I - inverter heat pump without water heater

COP - coefficient of performance of the heat pump EER - energy efficiency ratio of the heat pump

Seasonal heating efficiency amounts to 450%

During the heating season, up to 4,5 kW of heat energy is generated from 1 kW of electricity. By comparison, a solid fuel boiler has an efficiency of up to 80%.

Remote service

IGLU® heat pumps are connected to a remote service platform that helps to detect and solve problems without calling a technician to the property.

Manufacturer's service

Warranty and post-warranty maintenance and commissioning is carried out by the manufacturer's local service center.

AIR-TO-WATER HEAT PUMPS IGLU® INUIT

FOR PRIVATE HOUSES, SEMI-DETACHED HOUSES, AND RURAL TOURISM **HOMESTEADS**

Aerothermal heat pumps **IGLU**® **Inuit**

IGLU® Inuit low-temperature heat pumps use air, which is transferred from one environment to another, to heat and cool homes, and to produce hot water.

Even at low outdoor temperatures, heat is extracted from the air and directed inside the building. Cooling is the reverse process – the heat accumulated indoors is transferred outdoors via a pump.

All necessary components inside the unit

(water heater, expansion vessel, three-way valve)

Heating, cooling and production of hot water

One unit performs three functions

 IGLU^{\otimes} Inuit air-to-water heat pumps use air and the energy it contains not only for indoor heating, but also for cooling and hot water production.

Integrated local control function

Controlled via telephone even without an internet connection

All heat pumps have an integrated local control function (Wi-Fi), which allows to control the unit conveniently via the IGLU® Home app, even where there is no internet connection. The app also displays the operating parameters of the heating system, information about the installation and its status.

Inverter technology

Adapts to family needs

IGLU® Inuit heat pumps, thanks to the variable power technology, adapt to the current heat demand and can also work continuously. With power reserve, inverter pumps heat water or cool rooms faster.

IGLU® Home smart app for convenient comfort control

- Indoor air and hot water production temperature control
- Activating the cooling function
- Switching automatic heat pump modes on/off

Convenient and easy installation

Air-to-water heat pumps are known for their very fast installation – they can be installed in just 1 day
